1. Create a New Project f. The first step is to create a new Rasa project. To do this, run: rasa init --no-prompt. The rasa init command creates all the files that a Rasa project needs and trains a simple bot on some sample data. If you leave out the --no-prompt flag you will be asked some questions about how you want your project to be set up.. This creates the following files:

Installing Packages#. This section covers the basics of how to install Python packages.. It's important to note that the term "package" in this context is being used as a synonym for a distribution (i.e. a bundle of software to be installed), not to refer to the kind of package that you import in your Python source code (i.e. a container of modules).
