Conversions with Dimensional Analysis (pp. 1 of 2)

Because there are 360° in a circle or one revolution, the relationship between radians and degrees is thus $2\pi \text{ rad} = 360^\circ$ so that $1 \text{ rad} = \frac{360^\circ}{2\pi} \approx 57.3^\circ$. Angular Velocity. How fast is an object rotating? We define angular

Any angle of rotation θ can be represented by a point A on a unit circle with a center at the origin of coordinates O and radius 1 . The angle is measured counterclockwise from the positive direction of the X-axis to a line from O to A , so $\angle XO A = \theta$ with $|OA| = 1$. Thus, an angle of 90° is represented by a
