Antiphospholipid Syndrome Handbook: Amazon.es ...
Antiphospholipid syndrome is a disorder characterized by an increased tendency to form abnormal blood clots (thromboses) that can block blood vessels. This clotting tendency is known as thrombophilia. In antiphospholipid syndrome, the thromboses can develop in nearly any blood vessel in the body, but most frequently occur in the vessels of the lower limbs.

Antiphospholipid syndrome - Genetics Home Reference - NIH
Antiphospholipid (AN-te-fos-fo-LIP-id) syndrome occurs when your immune system mistakenly creates antibodies that make your blood much more likely to clot. This can cause dangerous blood clots in the legs, kidneys, lungs and brain. In pregnant women, antiphospholipid syndrome also can result in miscarriage and stillbirth.

Antiphospholipid syndrome - Symptoms and causes - Mayo Clinic
Antiphospholipid (AN-te-fos-fo-LIP-id) antibody syndrome (APS) is an autoimmune disorder. Autoimmune disorders occur if the body's immune system makes antibodies that attack and damage tissues or cells. Antibodies are a type of protein. They usually help defend the body against infections.

Antiphospholipid Antibody Syndrome | NHLBI, NIH
In patients with systemic lupus erythematosus (SLE), the lupus anticoagulant is the strongest predictor of thrombosis, with a 50% 20-year risk. The most common manifestation of antiphospholipid syndrome is deep venous thrombosis. Stroke is the most common arterial event, and aPL are implicated most frequently in those under the age of 50.

Epidemiology of the Antiphospholipid Syndrome — Johns ...
Antiphospholipid syndrome (APS) is an autoimmune disorder. It occurs when your body's immune system makes antibodies that attack phospholipids (a type of fat found in living cells). The exact reason for this is not known. While APS is not passed through families in a predictable pattern, genetics are thought to play a role.

Antiphospholipid syndrome | Genetic and Rare Diseases ...
Antiphospholipid syndrome, or antiphospholipid antibody syndrome (APS or APLS), is an autoimmune, hypercoagulable state caused by antiphospholipid antibodies.APS provokes blood clots in both arteries and veins as well as pregnancy-related complications such as miscarriage, stillbirth, preterm delivery, and severe preeclampsia.The diagnostic criteria require one clinical event (i.e. thrombosis ...

Antiphospholipid syndrome - Wikipedia
Antiphospholipid syndrome (APS) is one of those, but plenty of people with APS never have symptoms, and there are very good treatments for those who do. APS is a disorder that affects how your...

Antiphospholipid Syndrome in Systemic Autoimmune Diseases ...
Shoenfeld et al. (2008) noted that antiphospholipid syndrome is characterized by up to 30 different autoantibodies, including those against platelets, glycoproteins, coagulation factors, lamins, mitochondrial antigens, and cell surface markers. Some of these may have an additive effect on the prothrombotic tendency of the syndrome.

Antiphospholipid syndrome - Conditions - GTR - NCBI
Antiphospholipid syndrome (APS) is a systemic autoimmune disease characterized by production of antibodies – antiphospholipid antibodies (aPL) – that "attack" the person's own body, resulting in blood clots and/or pregnancy complications. Antiphospholipid-antibody-positive patients also may develop other clinical problems.

Antiphospholipid Syndrome and Potential New Treatments | HSS
Antiphospholipid syndrome (APS), sometimes known as Hughes syndrome, is a disorder of the immune system that causes an increased risk of blood clots. This means people with APS are at greater risk of developing conditions such as: deep vein thrombosis (DVT), a blood clotthat usually develops in the leg

Antiphospholipid syndrome (APS) - NHS
Catastrophic antiphospholipid syndrome (CAPS) refers to an acute event when thrombosis is found in three different organs over the period of a week, with biopsy evidence of microthrombi and the presence of APLs or lupus anticoagulant in a titer higher than 40 U/L.
