OpenFOAM

This and other requirements demand that the principal programming language of OpenFOAM has object-oriented features such as inheritance, template classes, virtual functions and operator overloading. These features are not available in many languages that purport to be object-orientated but actually have very limited object-orientated capability, such as FORTRAN-90.

OpenFOAM 6 | OpenFOAM

OpenFOAM represents scalars, vectors and matrices as tensor fields. A zero rank tensor is a scalar, a first rank tensor is a vector and a second rank tensor is a (3×3) matrix. OpenFOAM contains a C++ class library named primitive (`$FOAM_SRC/OpenFOAM/primitives/`) which contains classes for the tensor mathematics.
